DESCRIPTORS: *Threads, Processing, USSR.

Further improvement of the quality of sewing threads could be obtained by increasing the production of double-twisted threads, especially those cabled 4-fold (2 x 2). Simultaneous change-over of 50% of the double-twisted thread cabled 6-fold to double-twisted cabled 4-fold would make it possible to replace, without increasing the manufacturing costs and additional equipment, 20-25% of single-twisted threads by double-twisted ones and to increase the specific gravity of double-twisted threads by up to 40%. DESCRIPTORS: *Atomic bomb explosions, *Aquatic animals, *Marine biology, Sea water, Radioactivity, Pacific Ocean.

The testing of thermonuclear bombs in the Pacific basin has resulted in the formation of a number of relatively limited areas with increased radioactivity of water, plankton, benthos and the fish living there, close to the sites of the explosions, and also practically all the water masses filling the western part of the Pacific have within a few years acquired high levels of radioactivity.
